

Consequences of migraine: from episodic migraine to medication overuse

Industry 3-day satellite symposium on the occasion of the 7th Congress of the European Academy of Neurology (EAN) – Virtual 2021 with educational financial support provided by H. Lundbeck A/S.

Please join us for our exciting 3-day satellite symposium on the occasion of the 7th Congress of the EAN – Virtual 2021.

Professor Cristina Tassorelli will start the series with a discussion on the heterogeneity and consequences of episodic migraine on Sunday 20 June. Professor Dawn Buse will then consider the impact of chronic migraine on Monday 21 June, when research findings will be placed into perspective by Electra, a working mom and migraine warrior. Finally, on Tuesday 22 June, Dr Giorgio Lambru will focus on the consequences of medication-overuse headache. Our expert speakers will explore potential points of intervention as well as the current challenges in diagnosis and treatment. We welcome attendee participation during the symposium and there will be opportunities to be actively involved via the live Q&A sessions following the presentations.

Professor Cristina Tassorelli

University of Pavia
Pavia, Italy

**Sunday 20 June,
16:15–16:45 CET**
